**Ruby Dawn x Self**

**Deep Orange Red**

**SL1817**
R 100

**Tornado Kid**

**Roly's Crimoleen x Roly's Chiffon**

### BREEDER'S INFORMATION
**These are all 2015 seedlings with 5 to 9 leaves.**

**SL1801** - A cross of two bronzes with the objective to combine the good qualities in both.

**SL1802** - The aim with this cross was one, to get better recurve and two, to play with 'gunro' colours.

**SL1803** - Two high quality plants with green throats and I think the Remus back ground can combine well with Angelica which splits for peach.

**SL1804** - The first step to breed improved versi-colours.

**SL1805** - This cross will probably result in oranges splitting for group 1 and 2.

**SL1806** - Breeding for recurve shape bronzes.

**SL1807** - Combining Naude Peach genetics with top group 1 yellow.

**SL1808** - Breeding for recurve shape bronzes.

**SL1809** - Zol was bred from Soft Touch on Hirao. Who knows?

**SL1810** - Line breeding for improved Apple Blossoms.

**SL1811** - Line breeding for improved Bronzes.

**SL1812** - Sibling cross with the aim to get the pollen parent flower shape and a variation of colours.

**SL1813** - These two outstanding multi tepal plants can produce top quality offspring.

**SL1814** - Pigmented and green stems are available.

**SL1815** - We hope to maintain colour with some better flower shapes.

**SL1816** - Reds are always popular but difficult to breed. Hope for a winner.

**SL1817** - This cross should produce bi-colours of quality.
